COURSE OVERVIEW

The business architecture has many components and artifacts. They might not all be applicable to every enterprise. The techniques and tools that you will apply in the workshop can be tailored to your specific company's environment. The key is to gain a "good enough" understanding so that you can communicate the benefits of relevant business architecture components and artifacts and know which will provide the biggest business value. This three-day workshop offers a breadth of topics covering enterprise-wide analysis while drilling down into the business architecture.

COURSE OUTLINE
