We, at Cprime, are aware that migrating from server to Cloud may be challenging to navigate. We also know that your transition may take time. Each of you have your own unique requirements and are at different stages of readiness on your journey to the cloud and sometimes a quiz just won't cut it. Cprime is here to support you.

We can guide you through executing a smooth and seamless migration, ultimately setting your organization on a path to success with more options and accessibility to Atlassian innovation.

Here are some benefits migrating to cloud:

- On-premise workloads come with its share of hidden costs; from security and maintenance to downtime and capital depreciation. Choosing a SaaS or cloud deployment environment operationalizes cost in a consistent and predictable manner.
- Leveraging the cloud enables your Atlassian stack to easily scale as your business needs grow without the need for capital planning and outlay or extended change management.
- Atlassian continues development and innovation for their cloud products so that they will grow and evolve with your organization.

To help simplify what can be sometimes a complex migration, we have a solution that can flex and be tailored to any unique requirements, supporting anything from basic to fully custom enterprise migrations.

1. Migrate with confidence; your data fidelity and security are of the utmost priority with the *Cprime Guarantee*.
2. Server to cloud don't always map one-to-one with variations of app versions to consider. Cprime conducts an extensive gap analysis and uses custom APIs for proper extraction and mapping. The Migration Solution offers a detailed migration plan, including an automated Product to assist with extraction, translation and loading of data from server to cloud to ensure that everything that needs to move over, will, and maintain their integrity.
3. Have peace of mind that the Migration Solution includes a test migration and UAT to ensure a smoother proactive production migration.
4. Cprime understands that successful onboarding and post migration support are just as important as the migration itself! With customizable options for onboarding training and post migration support options, you can migrate with confidence that your teams and users will be able to quickly adopt and support this new tool.
