

The background of the slide is a dark, semi-transparent image of a business meeting. A woman in a light-colored shirt is standing and looking at a man in a dark shirt who is sitting and looking at a laptop. In the background, a whiteboard is covered with various sticky notes and diagrams. Some of the visible notes include 'Main Task 1', 'Medium Low', 'Mitigated (2021)', '100%', '3 Years Old', and 'Show Risk'. There is also a small diagram of a circle with a dot in the center and a line graph showing an upward trend.

Consumer Goods Company

COMPANY DETAILS

Industry: Consumer Goods (Food and Beverage)

Company Size: Over 22,500 (parent company)

Location: Canada

Products: World-famous packaged food and beverage brands

Cprime Services: Adopting and Adapting Agility Workshop, Scrum Master Workshop, Product Discovery Workshop, Manager Workshop, Roadmaps, Agile Pod Launch

THE PROBLEM

Few industries can match the competitive nature of nondurable consumer goods. Even long-time international leaders must continually innovate and streamline to maintain and grow market share. The Canadian division of a large food and beverage producer recognized this and tapped Cprime experts to help boost agility and speed to market for new and updated consumer goods.

Consumer Goods Company

COMPETITIVE PRESSURE

Despite such a strong and storied position as a consumer goods leader, this organization is not immune to the strong competitive pressure that pervades the global industry. While they are currently the largest food and beverage company in Canada, there are over a dozen larger international players that are always striving to make inroads into North America. Likewise, hundreds of smaller companies and startups are constantly disrupting the status quo.

As a result, and backed by a strong corporate culture, this organization recognized the need to continually improve. They place a high value on innovation and quality but also determine the need to speed up their time to market for new and updated products and brands.

In 2021, they reached out to Cprime and started down that path.

THE NEED FOR AGILITY

Enterprise agility—the sum product of Cprime’s wide array of consulting, coaching, and support services—fills the need for speed and agility in any large organization. Of course, Agile methodologies have traditionally been applied to software development and tangentially connected disciplines. But, Agile principles are not limited strictly to IT applications, and our work with this organization exemplifies that.

The organization’s leadership wanted to solidify Agile principles and practices into their product development workflow so they could bring new and improved products to market faster. They knew that the existing framework, which had been so successful in the past, needed to pivot as competition sped up. Time that could previously be dedicated to management updates and approvals needed to be tightened up. Visibility into every stage of the workflow needed to be expanded. And, cross-team collaboration and problem solving needed to be elevated even further than it was.

If those challenges could be met and overcome, nothing would stand in the way of this organization achieving agility in product development.

Consumer Goods Company

A STRONG FOUNDATION FOR AGILITY

To accomplish these lofty goals, Cprime laid out an aggressive training and coaching strategy designed to upskill the organization's product development and support teams and get them thinking and working together in a more Agile way.

A series of workshops were held to introduce key Agile concepts as well as how Agile can be scaled to the enterprise level. Role-based workshops were also held to ensure the Scrum Masters and management teams were fully trained and ready to take on the task of leading this Agile transformation. Later in the engagement, Cprime coaches helped the teams develop strategic roadmaps for upcoming product launches, truly incorporating Product Agility into their robust existing product development workflow.

In addition to the formal workshops, Cprime coaches provided ad hoc assistance and support throughout the six months that have passed since the engagement began.

STRONG RESULTS AND A BRIGHT OUTLOOK

While this initial engagement is still too new to see quantifiable results, the anecdotal evidence is clear.

The organization's teams are reporting strong execution with low variance using the new Agile processes. Stakeholders at all levels have much greater visibility into the work than they previously did, and that transparency supports continuous improvement. The team members recognize the benefits of a more collaborative atmosphere that empowers them to solve problems quickly and effectively. And, perhaps most importantly, the newly improved workflow has brought to light roadblocks in the existing processes that can now be addressed to achieve the faster speed to market that originated the organization's need for this solution.

So, all stakeholders fully expect their new and improved products will make it to market faster in 2022 as a direct result of their engagement with Cprime.

That's why there's no sign of the collaboration ending. Cprime's Rita Emmons, the Business Agility Leader, working closely with the organization in recent months, has a significant roadmap of future enhancements in the works. And the organization's leadership team are excited to see what the future holds as they pursue Enterprise Agility.
